GRADE 12

AGRICULTURAL SCIENCES P1

FEBRUARY/MARCH 2017

MEMORANDUM

MARKS: 150

This memorandum consists of 9 pages.

SECTION A

QUESTION 1

1.1	1.1.1 1.1.2 1.1.3 1.1.4 1.1.5 1.1.6 1.1.7 1.1.8 1.1.9 1.1.10	A ✓ ✓ C ✓ ✓ A/B ✓ ✓ B ✓ ✓ D ✓ ✓ D ✓ ✓ C ✓ ✓ A ✓ ✓	(10 x 2)	(20)
1.2	1.2.1 1.2.2 1.2.3 1.2.4 1.2.5	Both A and B ✓✓ B only ✓✓ None ✓✓ A only ✓✓	(5 x 2)	(10)
1.3	1.3.1 1.3.2 1.3.3 1.3.4 1.3.5	Amylase/ptyalin ✓✓ Commercial farmer ✓✓ Superovulation ✓✓ Ejaculation ✓✓ Courtship ✓✓	(5 x 2)	(10)
1.4	1.4.1 1.4.2 1.4.3 1.4.4 1.4.5	Cardiac ✓ Deep litter ✓ Dry ✓ Cloning/nuclear transfer✓ Ovum/egg/female/reproductive sex cell/gamete✓	(5 x 1)	(5)

TOTAL SECTION A: 45

SECTION B

QUESTION 2: ANIMAL NUTRITION

2.1	A representation of the alimentary canal of a farm animal.			
	2.1.1	Farm animal represented by the alimentary canal Pig ✓	(1)	
	2.1.2	Importance of parts A and C A – Assists in chemical digestion of food C – Assists in chemical digestion and absorption of food ✓	(1) (1)	
	2.1.3	 Explanation of mechanical digestion Breaking down of the complex food particles into smaller, simpler particles ✓ through physical objects/teeth ✓ 	(2)	
2.2	The abso	rption of nutrients from the small intestines		
	2.2.1	Identification of transport A – Active absorption/carrier molecule theory ✓ B – Passive absorption/osmosis/diffusion ✓	(1) (1)	
	2.2.2	 Reason Active absorption • Nutrients move from a lower concentrated area to a higher concentrated area/against the concentration gradient through an energy carrier (ATP) ✓ Passive absorption • Nutrients move from a higher concentrated area to a lower concentrated area/along the concentration gradient ✓ 	(2)	
	2.2.3	Identification of the structure labelled C Differential permeable/partially/semi-permeable membrane ✓	(1)	
	2.2.4	 Nutrient absorbed through (a) Blood capillaries - Digested protein/carbohydrates/ amino acids /glucose/vitamins/minerals ✓ (b) Lacteal - Digested fats/glycerol and fatty acids ✓ 	(1) (1)	
2.3	The vario	ous feed components of a ration		
	2.3.1	Example of an energy rich concentrate Maize meal ✓	(1)	
	2.3.2	Feed supplement acting as a source of energy in licks Molasses ✓	(1)	

2.3.3 Suitability of urea for pigs

Not suitable ✓

Reason

 It cannot be digested by pigs/pigs are monogastric/only ruminant animals can utilise √

2.3.4 **Tabulation of rations**

SOURCE OF PROTEIN	EXAMPLE
Natural protein	Lucerne hay ✓
NPN protein	Urea ✓

able ✓ (3)

(2)

2.4 Fodder flow programme

2.4.1 Completion of the table

(a)
$$600 \times 120 = \frac{72\ 000}{1000} \checkmark = 72 \text{ tons } \checkmark$$

(b)
$$200 \times 120 = 24 000 \checkmark = 24 \text{ tons } \checkmark$$
 (4)

2.4.2 Determining the average cost to feed ONE animal for ONE day

- R114 277,80 ÷ 113 animals ✓
- = R1011,31 ÷ 120 days ✓
- = R8,43 ✓ OR
- R114 277,80 ÷ 120 days ✓
- = R952.32 ÷ 113 animals ✓
- = $R8.43 \checkmark$ (3)

2.5 Composition of two animal feeds

2.5.1 Calculating nutritive ration (NR) of FEED B

- NR = 1: % digestible non-nitrogen nutrients
 ✓ digestible protein
- = 1: <u>58</u> ✓ 12 NR = 1: 4,831:5 ✓ **OR**
- NR = <u>TDN-DP</u> ✓
- = 1 : <u>70% − 12%</u> ✓ 12%
- NR = 1: $4.83/1:5 \checkmark$ (3)

2.5.2 Justification for not recommending feed A

- Wide nutritive ratio ✓
- It has more carbohydrates and fats than proteins/fewer proteins than carbohydrates and fats
 √ (2)

2.6 **Pearson square method**

Calculating Pearson square

Oats meal 9% 24 parts ✓

Sunflower 38% 5 parts ✓

Ratio of oats: sunflower is 24:5 ✓ (4)

[35]

QUESTION 3: ANIMAL PRODUCTION, PROTECTION AND CONTROL

3.1 Scenario on the optimising of production

3.1.1 Natural resources

 Lower production outputs ✓ due to animals fending for themselves (2)

3.1.2 Feeding

Enough feed (pastures) ✓ will lead to good production ✓
 OR
 Less feed (pastures) ✓ will lead to poor production. ✓
 (2)

3.1.3 Exploitative practices

- Where the natural balance/equilibrium is disturbed √/due to poor veld management √
- Utilise the natural resources to such an extent that it is permanently damaged ✓ and impossible to recover✓
- More is taken out and nothing is put back in return ✓
- Maximum production no matter what the cost ✓
- Deliberate actions to damage the environment ✓ (Any 2)

3.2 Management practices conducted on piglets

3.2.1 Identification of management practices

A – Injection/inoculation/vaccination ✓ (1)
B –Tail docking ✓ (1)

3.2.2 Reason for the management practices

A – To administer iron/Fe to (1) piglets/supplementing/medication/immunisation ✓ (1) B – Prevent tail biting/cannibalism ✓ (1)

3.2.3 Mineral administered to piglets

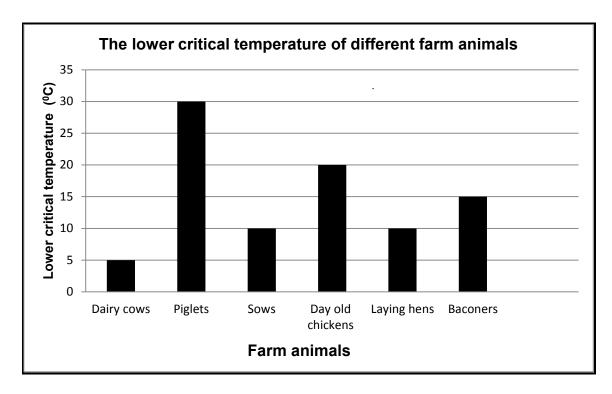

Iron/Fe ✓ (1)

3.2.4 Justification with TWO reasons

- Sow milk contains a limited quantity of iron/not enough√
- Most effective way to administer iron/Fe ✓
- Initial feed intake of piglets is low/inadequate to support their iron requirements √ (Any 2)

3.3 Body temperature and the lower critical temperature

3.3.1 Bar graph showing the lower critical temperatures of the different farm animals

Criteria/rubric/marking guidelines

- Correct heading ✓
- X-axis correctly calibrated with label (Farm animals) ✓
- Y-axis correctly calibrated with label (Lower critical temperature) ✓
- Correct units (°C) ✓
- Bar graph ✓
- Accuracy ✓ (6)

3.3.2 Identification of the animal inefficiently using feed

Piglets ✓ (1)

3.3.3 Reason for dairy cows producing milk at 6°C.

Their critical temperature is lower than 6°C ✓ (1)

3.4 Life cycle of a parasite

3.4.1 Classification and name the parasite above

- Internal parasite ✓
- Liver fluke ✓ (2)

3.4.2 Letter representing

(a) An intermediate host - D ✓ (1)

(b) Eggs hatch into larva - C ✓ (1)

DBE/Feb.-Mar. 2017

3.4.3 **Precautionary measure**

Keep animals away from moist/wet places/camping off infested ✓

Control intermediate host (snails) burn infested areas√

Keep areas around drinking places dry√

Breed resistant animals√

Graze animals on clean pastures/apply hygienic measures/use of feeders ✓

Zero grazing/ rotational grazing√

Provision of clean drinking water✓

Provision of good nutrition√

Deworming animals at certain intervals√

Isolation/separation of animals√ (Any1)

3.4.4 THREE economic implications of the parasite

- Decrease/poor/degradation of products/loss of production√
- Higher production costs/labour/time/medicines/ decreased profits/income ✓
- Poor reproduction outputs ✓
- Poor food conversion rate√
- Negative impact on economy/no export√ (Any3)

3.5 Passage on chicken housing

3.5.1 **TWO purposes of housing**

- To protect chickens from predators ✓
- To create an environment for growth and development ✓ (2)

3.5.2 TWO to consider when building a chicken house

- Building to be cost effective ✓
- Orientation of the building to be east to west ✓
- Building site to be well drained and aerated✓
- Roofing material should be insulated and be reflective✓
- Enough ventilation√
- Even distribution of light√
- Should provide the right amount of heat√ (Any 2)

3.5.3 **TWO examples of equipment in a poultry house**

- Feed troughs ✓
- Water drinkers/troughs ✓
- Lighting ✓
- Nesting boxes ✓
- Roosts ✓
- Bedding ✓
- Foot baths ✓
- Air conditioning/fans/heaters√
- Incubators√
- Thermometer√
- Egg trays√
- Egg scales√

(Any 2) (2)

[35]

(2)

(1)

(3)

(2)

QUESTION 4: ANIMAL REPRODUCTION

4.1 Embryo and foetus development

4.1.1 Identification of the structures

- (a) **B** Allantois ✓
- (b) **E** Foetus ✓
- (c) F Umbilical cord/placenta ✓

4.1.2 **Provision of the following:**

- (a) ONE function
- Protection of the foetus against shock/shock absorber ✓
- Prevents desiccation of the foetus/dehydration/drying of foetus
- Lubrication of birth canal√
- Regulates temperature around the foetus ✓ (Any 1) (1)
- (b) ONE constituent of D
- Amniotic fluid/water/liquid ✓ (1)
- (c) Place where D occurs
- Inside amnion/C ✓

4.1.3 Time to detect rectal pregnancy

3–4 months into pregnancy/gestation ✓ (1)

4.2 Role of hormones

4.2.1 **Explanation of hormone**

- The chemical substance secreted by endocrine glands/ovaries/ uterus transported in the blood ✓to specific parts/target organ of the body performing specialised functions ✓
- 4.2.2 Primary function of hormones
 - (a) Testosterone
 - Development of the secondary male characteristics ✓ (1)
 - Enhances sexual desires√
 - Stimulate sperm production√
 - (b) Luteinising hormone (LH)
 - Rapture the membrane of the follicle during ovulation ✓
 - Tightening the infundibulum around the ovary ✓
 - Stimulates secretion of progesterone√
 - Maturation of the oocytes√
 - Formation of the corpus luteum ✓ (Any 1)

(c) Oestrogen

- Develop the functions of the secondary sex organs ✓
- Responsible for the onset of oestrus/behaviour changes ✓
- Signs of oestrus ✓
- Contraction of the uterus ✓
- Promote growth of the mammary duct system ✓
- Stimulates Graafian follicle✓
- Stimulates secretion of LH✓
- Delays/inhibits secretion of FSH✓
- Increases blood supply to the uterus√

	4.2.3	Hormone responsible for : (a) Maintaining the Corpus luteum – Progesterone ✓ (b) Growth and development of the Graafian follicle – FSH ✓	(1) (1)		
4.3	Oestrus cycle of dairy cattle				
	4.3.1	Determination of the number of cows on oestrus 10 ✓	(1)		
	4.3.2	Indication of time 20 cows will be in oestrus 18:00 to 00:00 ✓	(1)		
	4.3.3	Tendency of cows in oestrus from 12:00 to 06:00 Increase/higher/more/from 10 to 45 cows ✓	(1)		
	4.3.4	The number of cows in oestrus from 18:00 to 06:00 20 + 45 cows ✓	(0)		
		= 65 cows ✓	(2)		
	4.3.5	Best time to inseminate 12:00 to 18:00/in the afternoon✓	(1)		
	4.3.6	Reason Time when most (45 cows) are in oestrus/in heat ✓	(1)		
4.4	The udo	der of a dairy cow			
	4.4.1	 Identification of the parts A - Alveolus ✓ B - Lobe ✓ C - Teat ✓ 	(1) (1) (1)		
	4.4.2	 Definition of lactation Period of milk production by female animals/cows ✓ Starting soon after parturition for an average of 305 days ✓ Involves the hormones prolactin and oxytocin ✓ (Any 2) 	(2)		
	4.4.3	 Comparison of milk and butterfat production Milk production increases until peak production thereafter it decreases √ Butterfat production decreases until peak production thereafter it increases √ 	(2)		
4.5	Difficul	t births			
	4.5.1	Scientific term for difficult births Dystocia ✓	(1)		

4.5.2	 Reason for difficult births in heifers Heifers are physically smaller ✓ and less (younger)/age ✓ Incorrect presentation/position/posture ✓ Too large foetus/hydrocephalus ✓ Deformities of the foetus ✓ Torsion/twisting of the foetus ✓ Prolapsed uterus ✓ Multiple births/twins ✓ Size of pelvic area ✓ Weak/ ineffective labour ✓ Cervix failing to dilate ✓ Prolonged gestation/pregnancy period ✓ Malnutrition ✓ 	developed	
	 Diseases√ 	(Any 2)	(2)
4.5.3	 TWO managerial measures to reduce difficult births Use bulls renowned for small calves/low birth weight Mate heifers at the ideal age/mass/not too early ✓ Use a controlled/well-planned breeding season ✓ Well planned feeding programme/avoid overfeeding Planned health programme ✓ 	ht √	(2)
4.5.4	 Definition of placenta retention The failure to expel the placenta/membranes ✓ within 12 hours after parturition/birth ✓ with negative effects/complications ✓ 	(Any 2)	(2)
	mai negative enectoremphotherio	(/ wiy <i>=)</i>	\ - /

TOTAL SECTION B: 105
GRAND TOTAL: 150
